

gasoline or fuel. It is not yet certain that the mixture is oil (fuel) or not oil. Material testing is not conducted to determine the oil mixture is fuel or gasoline. The result can be concluded that distillation of used oil can be done in such a method so as to produce two mixtures of liquid oil and water.

The distillation product has not been tested to be an alternative fuel. It cannot be proven that distillation results may not necessarily be an alternative fuel. This paper proves that used oil can be distilled into new products clearer and smell like fuel. The process of being fuel from the distillation product has not been up here need to proceed further into alternative fuel.

4. Acknowledgements

Thanks God for the grace of God for all his gifts so that this scientific work is completed successfully. The title of the study was conducted from May 2017 until August 2017 Design And Testing Of Oil Distillation Performance Tools Become Alternative Fuel.

Thanks to the author of the authors who have provided support support, prayer, and funding, Mr. Dr.Ir. Leopold O N, S.TP., M.Si. as mentors who have provided advice and direction in this research. In addition, the award of the author conveyed to Mr. of the Center for Materials and Engineering along with the staff who had assisted during the data collection. Hopefully this scientific work useful.
